TRADE AREA PROFILE

This report was prepared for the Lenexa Economic Development Council. It provides an overview of the salient socioeconomic and consumer market characteristics of the trade area within a five-mile radius from the intersection of K-10 Highway and K-7 Highway. The study produced estimates of the demographic characteristics of the trade area's current residents; an estimate of the rate of household growth since 2000; estimates of annual household expenditures; markets for selected consumer goods and services; and estimates of current business activity. The latest available weekday traffic counts on key arterial streets and highways are also provided.

METHODOLOGY

Demographic data presented in this report were derived from a mathematical model formulated by CERI Inc. The model provides estimates of the current demographic characteristics and spending patterns of the populations of the zip codes or portions of zip codes located within any trade area in Johnson County. Table 1 provides detailed demographic characteristics for each zip code within the trade area as well as summary statistics for the trade area in total. Table 2 shows estimates of annual household and per capita expenditures in the trade area for selected goods and services.

Estimates of the current number of business establishments and jobs within the trade area, shown in Table 3, came from a business activity model also developed by CERI. The 24-hour weekday traffic counts, shown in Table 4, are taken from the Transportation File of the *CERI Economic Data Service*. The file contains a compilation of the latest traffic counts taken by the Kansas Department of Transportation, the Johnson County Public Works Department, and cities in Johnson County. A glossary of the terms used in CERI's socio-economic model is included as an appendix.

Expiration Date:

The CERI Trade Area Demographic and Business Activity Models used to develop this report are updated annually. The information contained in this report is current through September 31, 2008.

Please Note: The base data used as independent variables in CERI's demographic and business activity models are discrete with each new update of the models and the methodology employed is constantly being refined. Therefore, direct comparison between figures presented in this report and in earlier reports for the same trade area might prove misleading and is not recommended.

Glossary:

Demographic Characteristics

Household: All individuals occupying a single dwelling unit.

Family Household: All members of a particular household related by blood, marriage, adoption or other legal arrangement. Includes households, with or without children, occupied by married couples or a male or female householder with no spouse present.

Non-Family Household: Unrelated persons sharing a household or a single person living alone. They may be independent consumers or two or more persons living together who use their incomes to make joint expenditures.

Average Household Size: An estimate of the average number of persons in a household as calculated by dividing total population by the total number of households.

Average Annual Household Growth Rate: The annual compound rate of change in the number of households.

Homeowner Household: One or more individuals living in their own home, townhouse or condominium.

Renter Household: Those paying rent for their dwelling unit as well as those living rent free in lieu of wages.

Race: The racial composition of the population is expressed as a percentage of the population. It is reported for six categories: White, Black or African American, Asian or Pacific Islander, American Indian or Alaskan Native, Two or More Races for persons identifying themselves as multiracial, and Some Other Race for those who do not identify with any of the specified groups.

Hispanic of Any Race: Hispanic origin refers to ethnicity, not race, and is a self-identified category. As such, persons of Hispanic origin may be of any race.

Age: Estimates of the percentage of the population falling within each of nine age groups.

Median Age: An estimate of the point at which the population distribution is divided into two equal parts. Half the population is younger than this point and half the population is older than this point.

Per Capita Income: Defined as total household income divided by total population. (See Total Household Income)

Average Household Income: Defined as total household income divided by total number of households. (See Total Household Income)

Median Household Income: An estimate of the point at which the household income distribution is divided into two equal parts. Half the households have annual earnings below this point and half the households have annual earnings above this point.

Total Household Income: The aggregate of all wages and salaries, other labor-related income, proprietor's income, rental income, interest income and transfer payments of all households within the specified geography.
